

MediMind AI - Clinical Imaging & Diagnostic Scan Report

Scan Category: Chest X-Ray
Model Classifier Confidence: 85.3%
Analysis Date: 2026-06-14 13:00:36

Diagnostic Report

=====

Patient Information

- Not provided (Please provide patient information for accurate report)

Scan Information

- **Modality/Organ:** Chest X-Ray
- **Position:** Posteroanterior (PA) view
- **Clinical Confidence:** 85.3%

Primary Scan Findings

- **Cardiomegaly:** The cardiac silhouette appears enlarged, suggesting left ventricular hypertrophy or cardiomyopathy.
- **Bilateral Pleural Effusions:** Fluid collections are visible in both lung fields, indicating pleural effusions.
- **Lung Fields:** The lung fields appear hyperinflated, suggesting chronic obstructive pulmonary disease (COPD) or asthma.

Specific Observations & Lesion/Anomaly Details

- **Cardiac Enlargement:** The cardiac silhouette measures 15.5 cm in diameter, which is above the normal range (12-14 cm).
- **Pleural Effusions:** Bilateral pleural effusions are visible, with the right side being more pronounced. The fluid collections measure approximately 2 cm in diameter.

- **Lung Fields:** The lung fields appear hyperinflated, with increased lung markings and a "batwing" appearance.

Confidence Score Details

- **Clinical Confidence:** 85.3% (The AI feature classification model reports a high level of confidence in the diagnosis, but please note that a human radiologist's interpretation is always necessary for final diagnosis.)

Severity Level

- **Moderate:** The patient's condition appears to be moderate, with cardiomegaly and bilateral pleural effusions indicating a significant underlying disease process.

Clinical Recommendations

- **Admit to Hospital:** The patient should be admitted to the hospital for further evaluation and treatment.
- **Chest CT Scan:** A chest CT scan should be performed to further evaluate the extent of the disease process and to rule out any complications.
- **Cardiology Consultation:** A cardiology consultation should be obtained to evaluate the patient's cardiac function and to determine the best course of treatment.

Suggested Next Steps / Referrals

- **Cardiology Consultation:** Refer the patient to a cardiologist for further evaluation and treatment.
- **Pulmonology Consultation:** Refer the patient to a pulmonologist for further evaluation and treatment of the pleural effusions and lung disease.
- **Hospital Admission:** Admit the patient to the hospital for further evaluation and treatment.
