

MediMind AI - Clinical Report Summary

Analysis Date: 2026-06-12 12:05:55

Comprehensive Health Analysis

Patient Information

- **Name:** Auditor
- **Age:** Not specified
- **Gender:** Not specified
- **Date:** 2026-01-10 and 2026-06-10

Diagnoses & Key Findings

- The patient has elevated glucose levels (125 mg/dL on 2026-01-10 and 110 mg/dL on 2026-06-10) which may indicate prediabetes or diabetes.
- The patient has elevated cholesterol levels (220 mg/dL on 2026-01-10 and 195 mg/dL on 2026-06-10) which may indicate hypercholesterolemia.
- The patient has normal hemoglobin levels (12.8 g/dL on 2026-01-10 and 13.5 g/dL on 2026-06-10).
- The patient has normal creatinine levels (1.1 mg/dL on 2026-01-10 and 0.9 mg/dL on 2026-06-10).
- The patient has mildly elevated ALT levels (48 U/L on 2026-01-10 and 32 U/L on 2026-06-10) which may indicate liver enzyme elevation.

Medications Listed

- Not specified in the report

Lab Assessment

- The patient underwent lab assessments on 2026-01-10 and 2026-06-10.

Extracted Lab Metrics

Normal Ranges

- **Glucose:** 70-100 mg/dL

- **Cholesterol:** 100-200 mg/dL
- **Creatinine:** 0.6-1.2 mg/dL
- **Hemoglobin:** 13.5-17.5 g/dL
- **ALT:** 0-40 U/L

Abnormal Values

- **Glucose:** 125 mg/dL (2026-01-10) and 110 mg/dL (2026-06-10) - Elevated
- **Cholesterol:** 220 mg/dL (2026-01-10) and 195 mg/dL (2026-06-10) - Elevated
- **ALT:** 48 U/L (2026-01-10) and 32 U/L (2026-06-10) - Mildly Elevated

Recommendations & Follow-Up Care

- The patient should follow up with their primary care physician to discuss the elevated glucose and cholesterol levels.
- The patient should consider lifestyle modifications such as diet and exercise to manage their glucose and cholesterol levels.
- The patient should have regular follow-up lab tests to monitor their glucose and cholesterol levels.

Specialist Recommendations

- **Endocrinologist:** To discuss the management of the patient's glucose levels and potential diabetes diagnosis.
- **Cardiologist:** To discuss the management of the patient's cholesterol levels and potential cardiovascular risk.

Executive Summary

The patient has elevated glucose and cholesterol levels, which may indicate prediabetes or diabetes and hypercholesterolemia, respectively. The patient also has mildly elevated ALT levels, which may indicate liver enzyme elevation. The patient should follow up with their primary care physician to discuss these findings and consider lifestyle modifications and regular follow-up lab tests.
